

Adopted September 2026
Policy to be reviewed September 2027

Allergy Safety Policy

Allergy Safety Policy

Person responsible for this policy & it's implementation	Headteacher
Review Frequency	Annually or when an incident is experienced
Date approved	
Date of next review	
Purpose	To minimise the risk of any individually suffering an allergic reaction whilst at school or attending any school related activity. To ensure staff are properly prepared to recognise and manage allergic reactions should they arise.

Introduction and Core Principles

In line with Benedict's Law, we are committed to providing a safe, inclusive, and welcoming environment for all children, young people, staff, and visitors with allergies. Recognising the serious and potentially life-threatening risk posed by anaphylaxis, this dedicated policy establishes robust risk-mitigation measures and emergency response protocols.

Allergy is a spectrum of different allergic diseases. Reactions occur when a susceptible person is exposed to something (an "allergen") they are allergic to. Asthma, food allergy, eczema and seasonal rhinitis (hay fever) are all forms of allergy.

Anaphylactic reactions usually begin within minutes of being in contact with the allergen i.e., eating a trigger food, though can occur several hours later (i.e., allergy to Mammalian meat). Anaphylaxis involves difficulty in breathing and affects the heart rhythm. In extreme cases there could be a dramatic fall in blood pressure leading to collapse.

Once started, anaphylaxis reactions progress quickly. Investigations into fatal anaphylaxis show that there is only a 20–30-minute window of opportunity during which steps can be taken to prevent death – therefore giving emergency adrenaline **immediately** and calling Emergency Services (999) is crucial. **Anaphylaxis always requires an emergency response**

Anaphylaxis can occur without any other signs (such as a skin rash) being present. **Always consider anaphylaxis in someone with a known food allergy who has sudden difficulty in breathing.** Giving adrenaline in this context is very safe and may be lifesaving.

The most common causes of "whole body" allergic reactions – including anaphylaxis – are:

- foods (e.g. peanuts, tree nuts, cow's milk/dairy foods, egg, wheat, fish/shellfish and sesame);
- insect stings (e.g. bee, wasp);
- medication (e.g. antibiotics, pain medicines such as ibuprofen);
- latex (e.g. rubber gloves, balloons, swimming caps).

Even for food allergy, the vast majority of anaphylaxis reactions require the person to have eaten the food, although less serious allergic reactions can happen through skin or other contact. Anaphylaxis reactions due to skin contact are very rare. Children who have a skin reaction need monitoring for at least an hour.

Moulsham Infant School has a whole school awareness approach, because it ensures all staff and children are aware of what allergies are, the importance of avoiding the individuals' allergens, the signs & symptoms, how to deal with allergic reactions and to ensure procedures are in place to minimise risk of exposure.

Coeliac disease and food intolerance can present symptoms which are similar to those of food allergy; it is important that Coeliac disease and food intolerance is managed through dietary avoidance, but these conditions do not pose a risk of anaphylaxis and so they are not within this allergy safety policy.

Eczema, asthma and allergies sometimes occur together – known as the atopic triad. It is important that these are managed well in order to keep the individual healthy. Asthma training is needed by all staff and an individual's asthma care plan needs to be included with their individual healthcare plan. These conditions are not included in this allergy safety policy.

Moulsham Infant School understands that severe allergies are included in the Equality Act, 2010. The act considers a person disabled if they have a physical or mental impairment that has a substantial and long-term negative effect on their ability to carry out normal daily activities. Seasonal rhinitis (such as hay fever) is explicitly excluded from the definition of disability, unless it aggravates the effect of another health condition.

Emergency Treatment and Management of Anaphylaxis

What to look for:

Symptoms usually come on quickly, within minutes of exposure to the allergen.

Mild to moderate allergic reaction symptoms may include:

- a red raised rash (known as hives or urticaria) anywhere on the body
- a tingling or itchy feeling in the mouth
- swelling of lips, face or eyes
- stomach pain or vomiting
- mild throat tightness
- sudden change in behaviour

These symptoms are treated with antihistamines.

More serious symptoms are often referred to as the ABC symptoms and can include:

- **AIRWAY** - swelling in the throat, tongue or upper airways (tightening of the throat, hoarse voice, difficulty swallowing).
- **BREATHING** - sudden onset wheezing, breathing difficulty, noisy breathing, persistent cough.
- **CIRCULATION** - dizziness, feeling faint, sudden sleepiness, tiredness, confusion, pale clammy skin, loss of consciousness.

The term for this more serious reaction is anaphylaxis. In extreme cases there could be a dramatic fall in blood pressure. The person may become weak and floppy and may have a

sense of something terrible happening. This may lead to collapse and unconsciousness and, on rare occasions, can be fatal.

As soon as anaphylaxis is suspected, adrenaline must be administered without delay.

Action:

- Keep the individual where they are, call for help and do not leave them unattended.
- **LIE individual FLAT WITH LEGS RAISED** – they can be propped up if struggling to breathe but this should be for as short a time as possible.
- **USE ADRENALINE DEVICE WITHOUT DELAY** and note the time given. AAls should be given into the muscle in the outer thigh or nasal into the nostril. Specific instructions vary by brand – always follow the instructions on the device.
- CALL **999** and state **ANAPHYLAXIS (ana-fil-axis)**.
- If no improvement after 5 minutes, administer second adrenaline device
- If no signs of life commence CPR.
- Call parent/carer as soon as possible.

Whilst you are waiting for the ambulance, keep the individual where they are. Do not stand them up, or sit them in a chair, even if they are feeling better. This could lower their blood pressure drastically, causing their heart to stop.

All individuals must go to hospital for observation after anaphylaxis even if they appear to have recovered as a reaction can recur after treatment.

Minimising Risk and Exposure to Allergens

Minimising risk and the exposure to allergens is central to ensuring that individuals with allergies are safe from harm. Even a small amount of allergen can cause a reaction. Any food can cause a reaction with serious consequences for the individual and Moulsham Infant School **will** only eliminate a food following a risk assessment supported by medical advice when necessary. Where a food is restricted, this will be to the smallest area for the time necessary; for example, the cooking room for the duration of the lesson when the child with allergy is cooking. Blanket bans, especially to nuts, create a false sense of security. Whilst there are 14 key food allergens that cause over 90% of reactions, any food can cause a reaction.

Moulsham Infant School is allergy aware, ensuring that the staff and children are actively aware of the risk posed by allergens, take steps to minimise the risk of exposure and have robust emergency response plans in place.

Moulsham Infant School completes a school wide allergy risk assessment that seeks to minimise the risks of exposure to known allergens. The risk assessment will include:

- Identifying the food used within the curriculum and making adaptations to remove allergens that pose a risk for the whole group not just the student who has the allergy.
- Conducting specific risk assessments to manage the risks of exposure to allergens in individuals when planning external visits or trips
- Identify measures to manage risks of exposure to a food allergen through food brought in by others (for example, parents, children, staff).
- Identify measures to manage the risks of exposure to a food allergen through food provided by the school.

- Putting in reasonable measures to manage the risk of individuals being exposed to allergens where they have a known allergy to airborne or contact allergens
- Identifying non-food allergens within the environment and making adaptations to remove/reduce allergens that pose a risk; for example, the school dogs would require enhanced cleaning and limiting to specific areas, hygiene measures after students have worked with the school dog

Moulsham Infant School will ensure that allergy is included in all school risk assessments to identify risks and plan control measures to minimise the risk of exposure.

Moulsham Infant School will ensure that the risk of exposure is minimised by

- All school staff allergy training every year
- Educating students through awareness assemblies and within PSHE
- Educating PTAs (Parent Teacher Associations) about school expectations for allergy management
- Communicating with all visitors, temporary staff and cover staff that they will be teaching a child with an allergy and ensuring that the member of staff has been trained in allergy and anaphylaxis emergency response
- Working closely with parents/carers and health professionals to understand the student's allergy
- Monitoring this policy to ensure that the agreed practices are implemented
- Establishing and maintaining high hygiene standards amongst staff, children and visitors

Food Provision and Catering:

Moulsham Infant School will manage the risk of food allergy and provide clear information on allergens in food provided by:

- Ensure the school kitchen is compliant with the Food Standards Authority allergen management regulations
- Ensuring school kitchen staff provide information on food allergens to parents/carers as required.
- Provide children's allergen information to the kitchen staff in a timely manner to ensure that students can eat safely
- Enabling parents/carers to liaise with the school kitchen staff as required.
- Identify children with allergies at point of service by providing children with an allergy slip that identifies their allergy and ensures kitchen staff are aware of individual's allergies. Provide different coloured trays for particular students if required. Display photo record in serving area for reminders.
- Teach children not to food share, trade food or share utensils or food containers with the reasons why

When staff provide food for the children, they receive additional training to ensure they understand how to read labels for food allergens and how to prevent cross-contamination during the handling, preparation and serving of food.

Where food is not directly provided by the school (for example brought in by staff for the curriculum / event days, assemblies; parent/carer permission will be sought in advance to ensure inclusion and safety for children with allergies. **Children are not permitted to bring sweets / cakes to celebrate birthdays.**

These procedures apply to school led breakfast and after school provision. Where this is provided by a third party, Moulsham Infant School, ensures that this policy is shared and the third-party provider meets the same procedures.

Ensuring that PTA events, follow FSA (Food Standards Agency) legislation for food labelling, creating allergen matrices as necessary. Ensuring that PTA members who are serving food have a basic awareness of allergen management (signpost to free FSA training)

All children are eligible for School Meals. School will work with parents/carers to determine the best way of ensuring that children receive their meal.

Medication and Adrenaline Devices (ADs)

People at risk of anaphylaxis are prescribed two adrenaline devices which they should carry with them at all times. This includes the journey to and from;

- school,
- the classroom
- lunch area
- playground
- sports field
- when on visits or trips

Serious anaphylaxis is a time critical situation; delays in administering adrenaline have been associated with fatal reactions. An adrenaline device needs to be administered within 5 minutes so if the adrenaline device cannot be with them in the classroom, the adrenaline device should be stored in an appropriate central location that is unlocked and accessible at all times (including during wrap around care).

Adrenaline devices must be stored at room temperature (in line with manufacturer's guidelines) and not be exposed to extremes of heat. They should not be refrigerated or left in direct sunlight.

Spare Adrenaline Devices

The [Human Medicines \(Amendment\) Regulations 2017](#) permit "spare" adrenaline devices to be used for the purpose of saving a life. This might be, for example, a child presenting for the first time with anaphylaxis due to an undiagnosed allergy.

Moulsham Infant School holds spare adrenaline devices for use in emergency situations. These are not a replacement for a student's own adrenaline device. Children prescribed adrenaline are expected to have their own adrenaline devices with them at school for use in an emergency.

Moulsham Infant School holds:

Mylan Epipen (0.3mg) and Epipen Junior (0.15mg) adrenaline auto-injector – 2 of each

These are located in: Main school office – medical shelf.

They are stored in large plastic container, labelled 'Emergency Anaphylaxis Kit'

Allergy medical officer (Office Admin assistant) is responsible for checking that adrenaline devices are in date and remain clear (not cloudy) on a monthly basis. They will secure replacements one month before the current adrenaline device expires.

Adrenaline devices that are used will be given to the paramedic to be disposed of. Adrenaline devices that are out of date or where the adrenaline has degraded will be taken to a pharmacy to be disposed of.

In the event of anaphylactic reaction:

- Adrenaline should be administered as soon as possible, within five minutes. **Do not wait** to contact the emergency services before administering adrenaline.
- The child, young person or individual should not be moved. Adrenaline devices should be brought to them (whether their own prescribed ADs or “spare” ADs).
- If the child, young person or individual **has their own prescribed adrenaline devices**, these should be used in the first instance.
- If the child, young person or individual **does not have prescribed adrenaline devices**, “spare” adrenaline devices can be used.
- If the child, young person or individual’s **prescribed adrenaline devices are not available or misfire**, “spare” adrenaline devices can be used.
- If the individual has serious allergy and asthma and there is any doubt if they are presenting with anaphylaxis or having an asthma attack always administer the adrenaline first.

The [Human Medicines \(Amendment\) Regulations 2017](#) do not require consent to have been obtained for “spare” adrenaline devices to be used. It can be good practice for the school, college or setting to obtain advance consent from parents or the young person for “spare” adrenaline devices to be used, so that in an emergency, consent can be assumed to be in place. However, in an emergency situation anyone may take reasonable action to save a life without checking whether prior consent has been given.

Student self-management:

Adrenaline devices will be kept in the **child’s classroom in a red draw string bag**. At playtime and lunchtimes these will be taken out by a member of staff – playtime by the class teacher and by a MDA at lunchtime – person to be agreed and shared termly.

Staff Training and Emergency Response

All staff, including teaching staff, support staff, catering staff will be trained in allergy awareness and emergency response. The school is responsible for ensuring that supply, cover, coaching, peripatetic staff have received allergy awareness training. This will be checked by office staff when signing in.

Training can be online or face to face. The content needs to include:

- Allergy awareness, the risks it poses, how allergic reactions occur and how to manage them
- Allergy includes multiple co-existing conditions: asthma, eczema, hay-fever
- Understand the difference between food allergy, intolerance and coeliac disease
- That a student can be allergic to any food, not just the top 14 allergens
- Know the symptoms of allergic reactions and how to treat
- Know the symptoms of anaphylaxis and how to treat
- How to locate and administer adrenaline or an asthma inhaler

- All adrenaline devices should be used to train with as the child may have different ones to the spare adrenaline
- How to report an allergic reaction including
 - Mild to moderate
 - Anaphylaxis
 - Near miss/incident
- Understand their responsibilities in risk reduction to ensure that children prevented from coming into contact with their allergens
- Understand the impact that allergy can have on a child's wellbeing
- Understand the school's allergy safety policy and
 - How to check if a child is on the record of those with a known allergy
 - How to use an allergy or asthma action plan

Emergency preparedness

Moulsham Infant School will annually hold a practice response to anaphylaxis, review how the practice went and update policy and procedures.

Throughout the year staff will be reminded of key aspects of the policy such as:

- how to find out who has an allergy
- the storage of spare adrenaline
- practice with adrenaline trainer devices

Moulsham Infant School will communicate key messages regarding risk reduction leading up to festivals, trips and end of term celebrations.

During fire drills class teachers will ensure that a child's adrenaline device is with them.

Roles and Responsibilities:

Allergy lead and governing body:

The Head teacher and the governing body, are responsible for ensuring that the school's policy sets out the arrangements to reduce the risk of individuals coming into contact with their known allergens and sets out the emergency response plan for cases of anaphylaxis. The Headteacher and the governing body will monitor this policy with it being a standing agenda item at meetings. Moulsham Infant School have a named governor who works closely with the allergy lead and reports to the meetings.

Moulsham Infant School includes the risks pertaining to children and staff with allergy on the school's risk register.

Moulsham Infant School has a named member of the senior leadership team (Head Teacher alongside office staff) who are responsible for allergy safety which includes driving the implementation of the allergy safety policy and contributing to the review of the policy.

The allergy leads are responsible for:

- systems to collect allergy information during the enrolment process, ensuring that this information is shared with catering. Outside of the normal admission point, ensures that information is shared staff and catering teams as soon as possible but within two weeks of the child starting

- holding a register of children and staff with allergies including whether they hold adrenaline and whether they have an allergy action plan
- ensures that systems are robust for the identification of children at mealtimes
- Communication about:
 - the policy
 - the children who are on the register of those with allergies
 - the importance of recording and reporting near misses and incidents
- communication with:
 - governors to provide updates about the policy implementation
 - Health and Safety and Designated Safeguarding Leads to keep allergy safety as part of their roles
 - Outside agencies such as Health and Safety Executive (HSE) if a report under RIDDOR is needed
 - Caterer; the procedures in the kitchen and the procedures for ensuring that the children with allergies are provided with a safe meal
 - Parents/carers to enable them to input into IHPs (Individual Healthcare Plans) and to request allergy action plans when appropriate
 - Children to develop an understanding of allergy through information assemblies and workshops, participating in awareness days and weeks
- spare adrenaline devices and making sure these are checked and in date, with replacements being secured before the current ones expire
- that IHPs are created and communicated
- Training
 - ensuring that all staff annual training and that allergy is included in induction even for short term members of staff.
 - ensures that all staff have the opportunity to practice with trainer adrenaline devices at least annually but ideally a few times a year.

All Staff:

Responsible for:

- understanding their role in implementing this policy, recognising signs of allergic reactions, and acting swiftly in an emergency
- supporting the creation of the students IHP
- implementing the students IHP
- Creating an inclusive curriculum
- Curriculum adaptation to minimise risks
- Completing risk assessments for, curriculum activities involving food, trips and visits including sporting events
- Building proactive relationships with parents/carers
- Reporting near misses and incidents

Parents:

Responsible for:

- Adhering to this policy
- Providing school with the information they need to create individual health care plans
- Updating school when reactions happen outside of school or any changes to the student's allergy and its management.
- Ensuring that the child always has in date medication with them at school

Identification of Individuals with Allergies

Admissions Data Collection: Moulsham Infant School collects detailed medical information from parents/carers regarding known allergies, dietary restrictions, and treatment histories prior to admission. Medical / allergies form is part of the induction paper work that is requested. Office will chase if not received.

Information Sharing: UK GDPR does not prevent the sharing of a child's health information (special category data). Relevant information is securely compiled and shared as necessary in a controlled way with teaching staff, support staff, supply cover, and catering teams while maintaining appropriate data privacy. This is done through: Arbor.

Transition: Allergy information and existing care plans are shared as part of any child's transition. Moulsham Infant School will request allergy information from the previous school or setting and will consider whether any of the arrangements are suitable to implement. Moulsham Infant School work with parents/carers and the child if appropriate to write a new IHP. Staff will provide information about students for transition visits ahead of a formal move.

Staff: pre-employment questionnaires will ask whether they have any allergies. If an allergy is declared, there will be a discussion and action plan created to ensure that the member of staff has a safe working environment. Discussion and consideration of a plan will be part of the initial induction meeting.

Visitors and regular volunteers: will be asked about allergies ahead of their visit. If an allergy is declared, the allergy lead will be notified, and this information will be communicated as necessary to ensure that the visitor or regular volunteer has a safe working environment. This will be through discussion with allergy lead.

Student Individual Healthcare Plans (IHPs) and Allergy Action Plans

Allergy action plans

- These are clinical documents that are created by a GP / allergy nurse or allergy clinic. They detail the child's allergy and medication.
- These contain parent/carer contact details and must be signed by the parent/carer as this is the parental authority to administer medication including the administration of spare adrenaline devices.
- These will only be updated by the medical professional following a review of the student's allergy management, this could be annually or 5 yearly. Parents/carers or school need to update the photo of the child annually so that the child is recognisable.

Allergy action plans are issued for students who have an IgE (immune system reaction) food allergy and often a venom allergy that could lead to anaphylaxis. They are not issued for all allergies. Children with non-IgE allergies don't experience anaphylaxis and so an allergy action plan is not issued.

Individual Healthcare Plans (IHPs)

Individual healthcare plans are an essential communication tool that provide clarity about the arrangements which need to be in place to ensure that a child is fully included in the life of the school. It will identify exact risk-mitigation measures that need to be followed.

Individual Healthcare Plans are school owned documents that are co-created by school, parents/carers.

They should include any advice received from health professionals. If there is no advice from health professionals, information and support can be requested of the school nurses if this is needed.

Where a child has an allergy action plan and or an asthma plan, this must be included with the IHP.

It is good practice to review IHPs annually or when staff change however, they must be reviewed if an incident or near miss occurs. They need to be brought to the attention of supply or cover staff and be passed on during transition to a new school.

Moulsham Infant School will ensure that:

- children with an allergy action plan and/or an asthma plan have an individual healthcare plan
- children without an allergy action plan or asthma plan but have an allergy that needs active management over and above what other children need will have an individual healthcare plan
- individual healthcare plans are created whilst students are waiting for a diagnosis

School Trips and External Visits and event days in school.

Moulsham Infant School ensures that children with allergies are fully included in every trip, sporting event, or extracurricular activities. As part of the normal risk assessment for the trip there will be a section addressing allergen exposure in each activity, emergency medication, transport, and proximity to local emergency care will be undertaken with control measures identified. In order to ensure that the child is safe and included, alternative activities will be planned. This will include the safe storage of adrenaline for the duration of the school trip.

Staff leading school trips will ensure they carry all relevant emergency supplies. Trip leaders will check that all medication including adrenaline devices are with named adults for the duration of the trip. Teachers are responsible for ensuring that required medication is available for the trip - this may include sourcing from the office / parents. If medication is not available the child will be unable to attend the trip.

In conjunction with the allergy lead, the trip leader will review the risk assessment to determine whether the school's spare adrenaline devices should be taken on the trip. Moulsham Infant School will provide additional spare adrenaline devices should the risk assessment for the trip deem necessary to take them ensuring that students remaining in school still have access to spare adrenaline devices should the need arise.

Moulsham Infant School (trip leader) will notify the venue, when arranging a trip / sporting fixture, that a member of the group has an allergy.

Serious Incidents and "Near Misses":

Moulsham Infant School approaches serious incidents and "near misses" in a "no blame" spirit, seeking to learn lessons and address any issues which the incident identified, so that children are better protected in the future.

Moulsham Infant School is aware, when an incident occurs that materials such as residues of food consumed or handled or samples of fluids may constitute evidence, which may need to be seized and retained.

Moulsham Infant School uses CPOMS to log allergic reactions (incidents) and near misses (e.g. accidental exposure without reaction, or labelling errors) immediately completing the school's form, (appendix 1). The incident or near miss will be recorded and logged on CPOMS.

Moulsham Infant School will share the report with the child's parents/carers, the child (if appropriate) and the individual involved. They should be given the opportunity to discuss what happened and to contribute their views to the consequent lessons learned review. Moulsham Infant School will confirm what it has learnt from the incident and outline any actions it is taking as a result. The child's IHP will be updated if necessary.

If unsafe food was supplied by the school operating as a food business, the incident must be reported to the local authority environmental health team.

Wellbeing and Support

At Moulsham Infant School [allergy](#) safety is a priority and actions to ensure that children are included and safe are embedded into the school's culture. Children with allergies become anxious as a result of the risk of exposure to allergens and the potential for anaphylaxis, which may be compounded by living with difficult-to-control asthma or eczema.

Moulsham Infant School will:

- regularly communicate to children, parents and staff about allergies, ensuring ongoing awareness and appreciation of the severity of the potential risks
- include allergy and anaphylaxis lessons during assemblies, or as part of the RSHE curriculum
- plan school celebrations, rewards, and communal events inclusively from the outset to eliminate social isolation
- involve students (if appropriate) and staff with allergies in developing and reviewing the policy and procedures for allergy management
- understand that allergy bullying is extremely serious and actively monitor, prevent, and address any stigmatisation or bullying directed at individuals due to their allergies or dietary constraints
- invite parents of new children with allergies to have a tour of the kitchen so they can meet staff and understand the mealtime environment which may help to reduce parent's anxiety

- have proactive engagement with new parents / children with known allergies, explaining the school's policies and the support available

Safeguarding:

Moulsham Infant School recognises that a safeguarding referral may be needed, if there is a highlighted concern that a child might be at increased risk of being neglected, abused or exploited by persons inside or outside of their family unit because of their medical condition. This might occur where relevant information about a child's medical condition is not provided to a school, or where they are repeatedly sent without essential medication, thereby putting the individual at risk.

Unacceptable practice

Moulsham Infant School staff are clear about what constitutes unacceptable practice and are committed to ensuring that only good practice occurs. Should unacceptable practice occur the school will follow its own procedures to identify and address this, using staff conduct policies.

Examples of unacceptable practice include (but are not limited to):

- preventing children and young people from easily accessing and administering their medication in line with what is agreed in their Individual Healthcare Plan (for example prescribed adrenaline devices and asthma reliever inhalers) when and where necessary;
- assuming that every child with the same condition requires the same support;
- ignoring the views of the child or young person or their parents or carer;
- ignoring medical evidence or the opinion and advice of healthcare professionals;
- assuming that a child does not have an allergy because they do not yet have a diagnosis, for example while medical investigation is under way;
- sending a child who becomes unwell to a school office or medical room without suitable supervision. In the case of an emergency or suspected emergency (for example anaphylaxis) help should come to the child.
- requiring parents / carers (or otherwise making them feel obliged) to attend the school to administer medication or provide medical support to their child; or
- preventing children from participating or creating unnecessary barriers to them participating in any aspect of school life, including external visits and trips, e.g. by requiring parents to accompany the child.

Policy Review and Publication

This policy is published openly on the school website and is reviewed at least annually, or more frequently in response to local incident trends or updated statutory guidelines.
